DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/27/08 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 17-19 and 27 are rejected under 35 U.S.C. 102(b) as being anticipated by WO 00/69308.

With regard to claims 17 and 27, WO '308 discloses a hair treatment applicator (figs. 3 and 4) comprising a handle (the container to which the cap 1 screw into), a head (1) connected to the handle, the head comprising a first retaining structure (at 5, fig. 4) including a first base (14, fig. 8), a first plurality of tines (5) extending from the base, a first baffle (10, fig. 4) extending from the base which together form a first retaining volume, a second retaining structure (at 5) including a second base (14, fig. 8), a second plurality of tines (5) extending from the second base, a second baffle (10, fig. 4) extending from the second base which together form a second retaining volume; a

Art Unit: 3732

passage (figs. 3, 4) between first and second baffles, wherein the passage is capable of being free of hair treatment (Applicant is noted that the limitation "substantially free of said hair treatment" is as broad as there exists different types of hair treatment depending on the viscosity of the hair treatment, if the hair treatment of WO '308 being viscous, then the passage is being free of hair treatment; and it also depends on how much material being poured into each of the retaining structures, if only a little mount of material being applied to each of the retaining structures, then the passage 4 is free of the material); a hair treatment (translated abstract) contained in the first and second retaining structures. In regard to claims 18, 19, first and second tines extend substantially perpendicularly to the first and second base (figs. 3, 4).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 20-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO '308.

With regard to claims 20-26, WO '308 discloses the essential claimed invention except for the handle being integrally molded with the retaining structures, the applicator being molded as single piece an being made of polyethylene; WO' 308 also fails to show the shape of the tines being frusto-conical each tine with a proximal end diameter being .125 to .3125 inches and a distal end diameter of .0625 to .375 inches, a height of

Application/Control Number: 10/678,206

Art Unit: 3732

each tine being .25 inches to 1 inches and the passage width being at least .25 inches. It would have been obvious to one having an ordinary skill in the art at the time the invention was made to form the handle and the applicator as a single piece, since it has been held that forming in one piece an article which has formerly been formed in two pieces and put together involves only routine skill in the art. It would have been obvious to one having an ordinary skill in the art at the time the invention was made to employ the applicator being made of polyethylene, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. In re Leshin, 125 USPQ 416. And it would have been obvious to one having an ordinary skill in the art at the time the invention was made to construct each tine with a proximal end diameter being .125 to .3125 inches and a distal end diameter of .0625 to .375 inches, a height of each tine being .25 inches to 1 inches and the passage width being at least .25 inches, since such a modification would have involved a mere change in the size of the known component. A change in sizee is generally recognized as being within the level or ordinary skill in the art. In re Rose, 105 USPQ 237 (CCPA 1955).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robyn Doan whose telephone number is (571) 272-4711. The examiner can normally be reached on Mon-Fri 8:30-6:00.

Application/Control Number: 10/678,206 Page 5
